AI Consulting OS
Master Scrum Roadmap

This roadmap is designed for a 5-person startup team with similar JavaScript, Python, Java, frontend and backend experience. The project will use AI-assisted development (“vibe coding”), Agile methodology, and Scrum workflows to build an AI-powered SaaS platform for consulting firms, NGOs, agencies and proposal-writing organisations.

Project Vision

- Build an AI-powered SaaS platform for proposal generation, report writing, compliance checking, budget generation and document automation.
- Target recurring revenue: $20k–30k/month within 12–18 months.
- Use AI APIs instead of training custom AI models.

Core Tech Stack

- Frontend: Next.js + Tailwind CSS + shadcn/ui
- Backend: Node.js + Express.js
- Database: PostgreSQL
- AI: OpenAI API
- Document Processing: Python + pdfplumber + docxtpl
- Hosting: VPS initially
- Version Control: GitHub

Agile + Scrum Structure

- Sprint Duration: 1 week
- Daily Standup: 15 minutes
- Weekly Sprint Planning every Monday
- Sprint Review every Friday
- Sprint Retrospective at end of sprint
- Use Trello or Jira for sprint management

Team Workflow

- All 5 developers act as full-stack generalists.
- Responsibilities rotate every sprint.
- Each sprint has temporary leads for frontend, backend, AI, documents, and QA.
- Use Discord screenshare and collaborative debugging sessions.

Sprint 1 - Learning & Setup

- Learn Next.js basics
- Learn Express.js APIs
- Learn PostgreSQL CRUD
- Set up GitHub repository
- Set up Trello Scrum board
- Create landing page
- Set up authentication system
- Connect frontend to backend

Sprint 2 - File Upload & AI Integration

- Build PDF/TOR upload feature
- Extract text from PDFs
- Integrate OpenAI API
- Test AI prompts
- Store uploaded documents
- Create dashboard UI

Sprint 3 - Proposal Generator

- Generate executive summaries
- Generate methodologies
- Generate objectives
- Create editable proposal editor
- Save generated proposals to database

Sprint 4 - Compliance Checker

- Extract proposal requirements
- Compare against uploaded proposal
- Detect missing sections
- Generate compliance score
- Create compliance dashboard

Sprint 5 - Workplan Generator

- Generate timelines
- Generate milestones

- Generate staffing plans
- Create Gantt chart views
- Export workplans

Sprint 6 - Report Generator

- Upload raw notes
- Generate structured reports
- Generate conclusions and recommendations
- Generate executive summaries
- Create report templates

Sprint 7 - Knowledge Base

- Upload previous proposals
- Store organisation writing styles
- Use embeddings and vector search
- Implement retrieval augmented generation (RAG)

Sprint 8 - Export System

- Export DOCX files
- Export PDFs
- Improve formatting
- Create branded templates

Sprint 9 - Billing & Subscription

- Integrate Paddle
- Create pricing plans
- Restrict features by plan
- Track usage quotas

Sprint 10 - Collaboration Features

- Comments system
- Team workspaces
- Proposal approvals
- Version history

Growth Roadmap

- Month 1–2: Build MVP
- Month 3–4: Start onboarding first users
- Month 5–6: Improve AI quality and exports
- Month 7–12: Focus on retention and subscriptions
- Target 150–200 customers paying $149–199/month

Final Advice

The biggest competitive advantage of this startup is domain knowledge. Most developers do not understand consulting workflows, proposal structures, donor requirements and NGO reporting systems. Combining that knowledge with AI-assisted automation creates a strong business moat. Focus on: - speed - simplicity - proposal quality - beautiful exports - reducing workload Avoid overengineering early. Ship fast, improve continuously, and learn while building.
